

**ABSTRACT OF THE DISCLOSURE**

5 A system and method for statistical matching that determines statistical curves for data described in a data request and stored data that satisfies the request. The system may determine the statistical curves for each data type and determine whether any overlap exists between the statistical curves. A user may specify a particular acceptable percentage of data that may be used to satisfy the request. The data satisfying the request may be presented to the user or, alternatively, a match/no-match result may be presented indicating whether any data that satisfies the request exists.
